Portable TeleClinic™

Clinical Telemedicine in a Mobile Case

Portable TeleClinic is a self-contained telemedicine system that has the combined functionality of a desktop telemedicine solution and a mobile cart, and is designed for smaller spaces or to be transportable. The system comes complete with encounter management software and customized with medical devices for a clinical exam.

This “pack-and-go” system is perfect for healthcare applications that require clinical telemedicine equipment that they can carry into medical situations and/or set up in mobile clinics with limited space. Ideal applications include disaster response teams, emergency medical services, in-home clinical visits, oil rigs, mining fields and mobile health clinics.

Features:

• Available in 2 size options: large and compact
• Integrated ruggedized tablet PC operating on Windows platform, includes webcam and speaker phone to enable two-way video conferencing between clinician and consulting specialist.
• USB ports to easily connect, power and charge your medical devices.
• Integrated battery and battery status indicator (larger case only). Battery lasts 4-8 hours, based on run-time while in use.
• Padded storage area to safely store your medical devices and consumables.

The Portable TeleClinic is Easy to Configure to Your Needs:

1. Choose the case size (compact or large),
2. Select the telemedicine software & medical devices (see back for details)
Customize the Configurations to Your Clinical Evaluation Needs

Since a variety of customers require their own unique set of clinical equipment and technology, the Portable TeleClinic is designed to accommodate various encounter management technologies and devices*, such as:
