

What's True?

AGNES Interactive®

from the FDA:

AGNES Interactive is a collaborative patient assessment tool for telemedicine clinical exams. It is a web-based telemedicine software that enables remote clinical healthcare providers to capture and share medical device data, exchange documents and medical images in real-time, and participate in a live video conference - all in a single web-based platform. Features include:

- Delivers 100% live access to a Patient from any remote location**
 Transmission of all medical data is done in real-time and does not rely on any content sharing applications.
- Provides complete Physician mobility**
 Remote users have secure web-based access to exam site.
- Eliminates stethoscope hardware at receive side**
 Provides interface to connect a USB digital stethoscope to stream live heart/lung sounds to the remote physician.
- Enables live Video Conferencing**
 Clinician and remote specialist can teleconference, using the included point-to-point video module.
- Integrates with over 40 medical devices**
- Integrates with any EMR**
 Universal HL7 module allows you to save session information directly to your EMR of choice with a single configuration files.
- Installed and operational in minutes, with no back-end servers needed**

Clinician Reports asked healthcare practitioners to review AGNES Interactive. AGNES Interactive was tested against 6 key criteria, and each was graded on an A+ through F scale.

Margaret Hall,
FNP-BC

"AMD offers outstanding clinical application for the delivery of healthcare via telemedicine. The ease of using the program and hand held devices supports the clinical experience of the provider. Real-time audio and video between the originating and distant sites allows for a fluid clinical visit. We are very pleased with the quality of images and audio capabilities that transmit from our medical devices; stethoscope, otoscope, highscoop camera, dermatology camera, and vascular doppler. The ability to capture and store images is useful to the providers and contributes to documentation."

Andrew Whitney,
Director of Telemedicine
Services
Bryan Health

"Using AMD AGNES on our telemedicine carts allows us to bring a higher level of clinical care to our telemedicine encounters. This level of care differentiates us from other providers of rural emergency department telemedicine that are more consultative in nature. Our rural emergency telemedicine physicians are performing diagnostic evaluations and providing treatment, allowing local providers relief from 24/7 call-ins. The flexibility of the AGNES platform has also allowed us to bring outpatient specialties to rural areas with minimal investment on the part of the specialty physician."

Joy Xu, MD

"The AGNES telemedicine system changes the Chinese healthcare landscape and creates an entirely new user experience for the customer by offering the luxuries of personalization and convenience. With telemedicine, Chinese users have the power of accessibility in their hands to make appointments with American specialists when seeking a 2nd opinion for their difficult medical cases.

The AGNES telemedicine system delivers live access to the patient for clinical exams as well as storage user's medical records, which are important to building stronger relationships between patients and doctors."

Jason Peoples,
Regional E-Health
Coordinator
Carle Foundation
Hospital

"Utilizing AGNES Interactive has been a staple in the growth of our telehealth initiatives. AGNES Interactive reduces the reliance on robust and costly telepresence infrastructures to a simple web-based platform that provides clinical diagnostic device integration and real-time audio visual interactions from clinician to patients at remote sites. With the stigma of "one-more-thing" a reality for clinicians, ease of use is a key differentiator in the evaluation of telehealth platforms. With physicians and clinical staff alike, AGNES Interactive provides a solid foundation and simplicity that enable clinicians to integrate telehealth technology as an extension of the clinical practice easily and efficiently."

Nick O'Hare,
Director of Strategy and
Commercial Affairs
Mediserve HomeCare

"AMD is the way of the future. It has allowed us to increase efficiency, reduce waiting times for patients and provide more comprehensive consultations in a home visit scenario. Our patient satisfaction rating is in excess of 95% and we see ourselves increasing significantly the use of this technology over the coming months. "
